

Glitches in the Digital Transformation of Humanity

In the last couple of years, various technologies have been used to covertly transform people around the world into digital humans. From the world's point of view, it may sound like an upgrade of humanity, but from God's point of view, it is a downgrade.

Hardware installation glitches

Glitches due to faulty graphics card, RAM, or motherboard

2,809 Fetal Deaths in VAERS

Glitches due to faulty graphene oxide, Luciferase or ferritin spike proteins

Digital transformation must happen to fulfill Bible prophecy, but iron does not mix with clay. (Daniel 2:43)

As in most digital computer systems, the beta testing has had its glitches and user acceptance issues. The glitches include various health issues and death, and the acceptance issues include the voices of doctors and scientists and others who do not follow the official narrative of Big Pharma, Big Tech, and Big Brother.

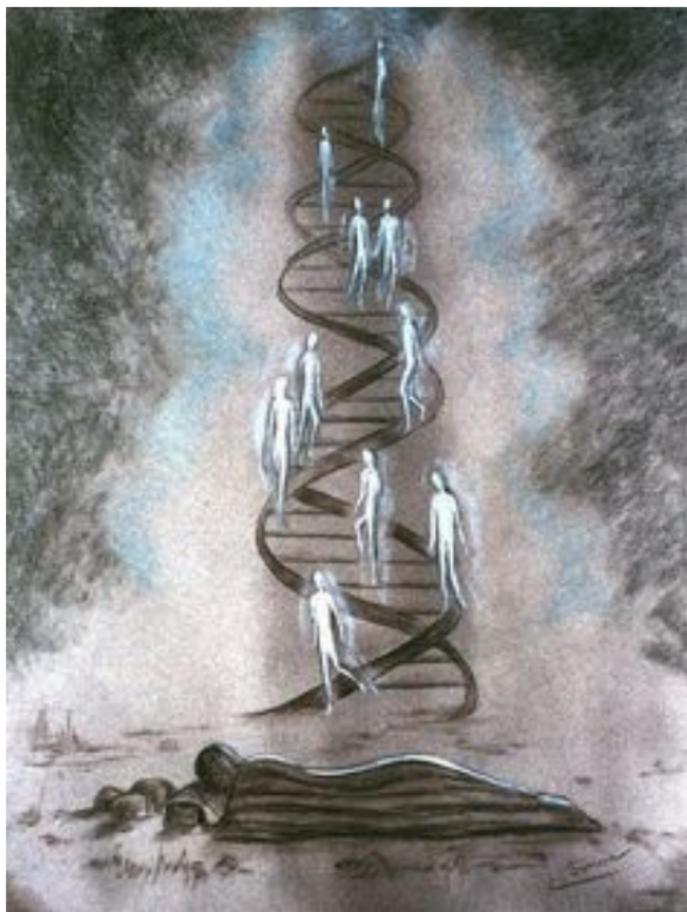

In light of the outcry of the truthful voices, it is important to understand the actual intended functionalities of the technologies used for digital transformation of humans. This paper outlines four major functionalities:

- **Identification**
- **Authentication**
- **Body-to-computer interfaces**
- **Brain-to-computer interfaces.**

This paper also mentions the downside of hardware installation and some glitches encountered.

1. Identification

In recent years, identity theft has become a problem, sometimes resulting in embarrassment or financial loss. However, a person's DNA uniquely identifies him or her. DNA is a person's God-given library that tells about his or her choices in life as well as choices of his or her ancestors. It thus has spiritual properties, and it is like a ladder to Heaven.

Due to the complexity of DNA, normal computers may require weeks or months to determine a person's DNA sequence. However, artificial intelligence running on a quantum computer can sequence a person's DNA in only a few minutes. The genomic sequence is the person's digital DNA identity.

However, if a person's DNA identity is known, it can theoretically be copied, so identity theft is still possible.

There are two solutions to preventing one's DNA sequence from being copied:

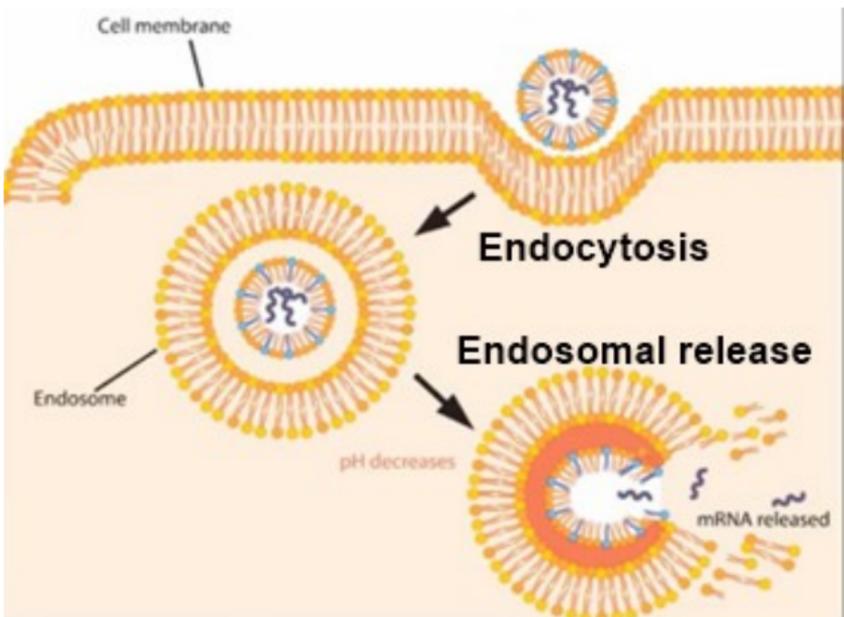

- 1. Never let anyone sequence it**
- 2. Use a unique random key that cannot be decrypted and insert it into the person's DNA through established DNA modification procedures.**

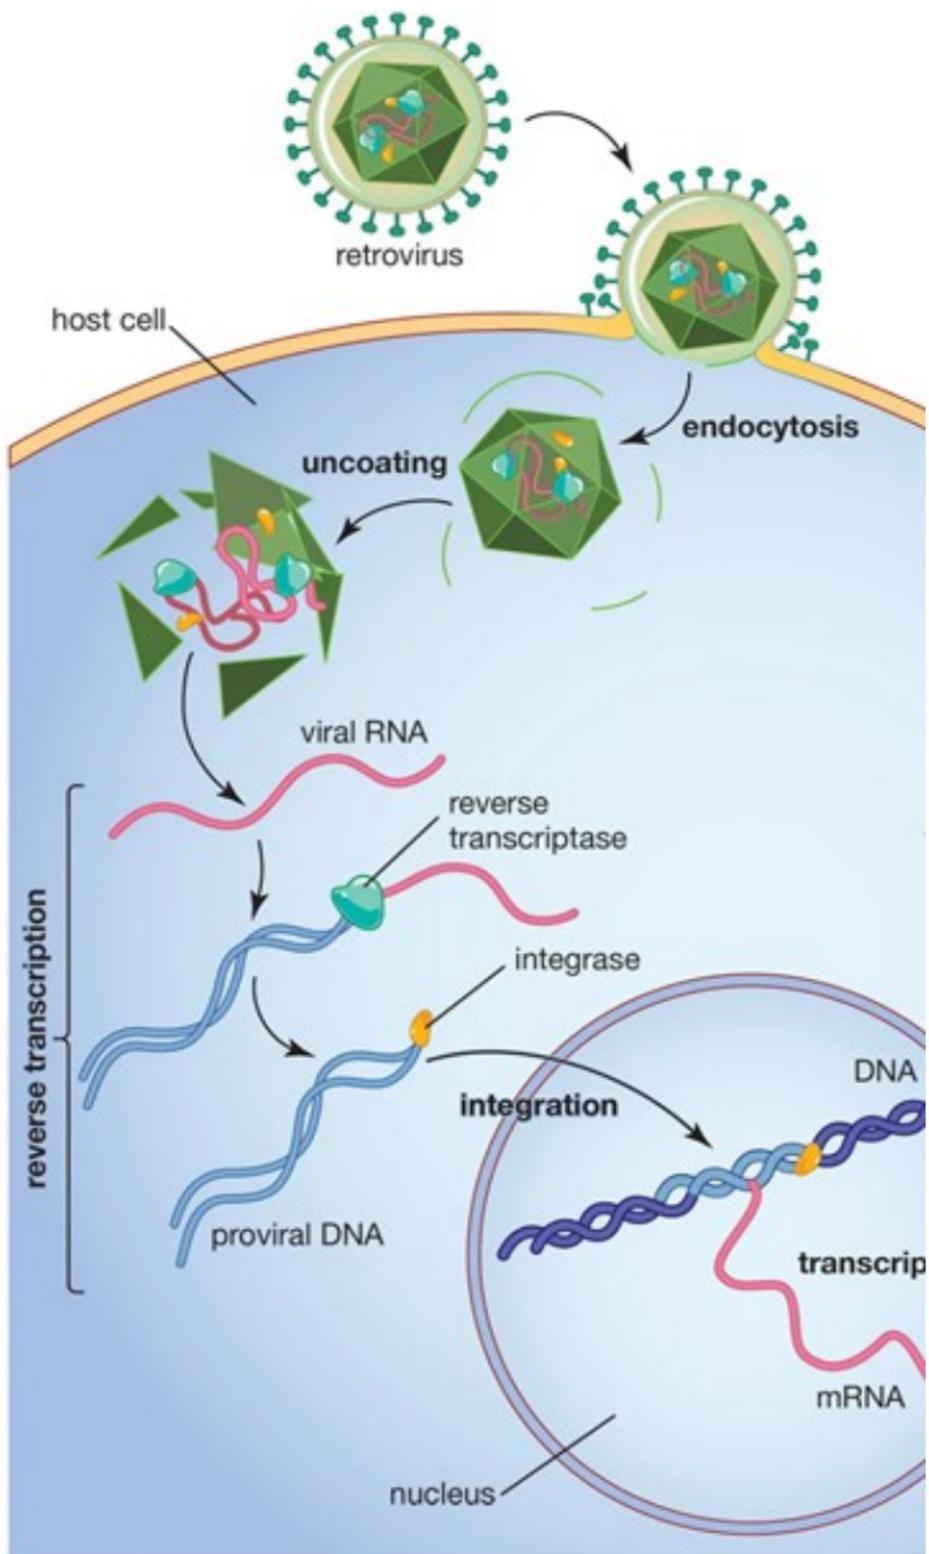

The first option is ideal, but it means living outside the system. The second option makes the person's digital DNA identity unhackable to anyone without access to his or her random key. The only way to effectively do this is to use a quantum computer to generate the unique random key.

Well-established DNA modification procedures are not widely-known, but they are well known and include:

- **Endocytosis of a synthetic mRNA virus into a cell's cytoplasm**
- **Endosomal release**
- **Reverse transcription inside the cell through HIV-1 inserts from the original virus to produce complimentary DNA (cDNA)**
- **Integration of the cDNA into the DNA of the nucleus of the cell through the enzyme integrase**

The downside of this technology is that the person must fully entrust his soul to the people who control the quantum computer system.

Essentially, the person must sell his or her soul to the devil to receive the devil's genetic markers and a digital DNA to be identified in the devil's computer system.

After making this deal, the person becomes “marked” for the devil, and the process is permanent. The really bad news is that this makes God very angry, because He designed our bodies to be temples of His Holy Spirit so that He could dwell in our bodies (1 Corinthians 3:16,17; 6:19,20; 2 Corinthians 6:14-17). Recall how the LORD Jesus was angry at people doing business in the Jerusalem Temple area.

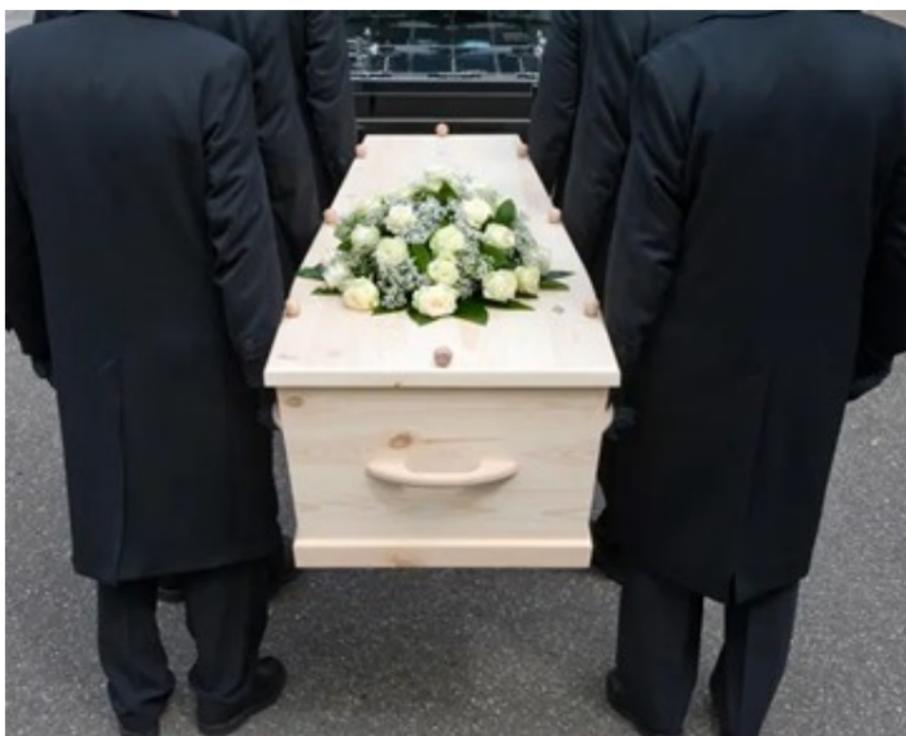

He is now even more angry at people who have sold their body temples to the devil in exchange for convenience and a digital identity.

Although people with DNA digital IDs receive many benefits in today's digital world, they forfeit their birthrights, like Esau did (Genesis 25:29-34; Hebrews 12:16,17). What may seem like a small choice is actually a huge decision that people all over the world have been facing (Joel 3:14): retain one's God-given DNA and trust in their LORD Jesus Christ for protection (Exodus 15:26) and provision (Matthew 6:25-34) or trust in science and technology, be removed from the Book of Life (Revelation 3:5), and suffer eternal separation from God in the Lake of Fire (Revelation 14:9-11; 20:15).

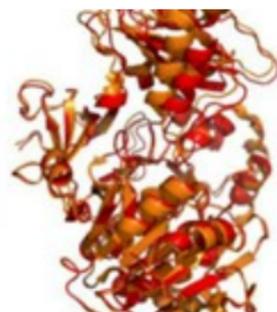

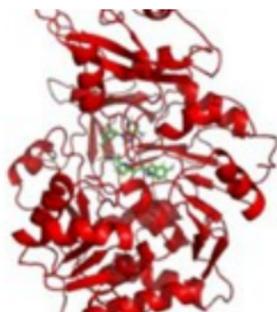

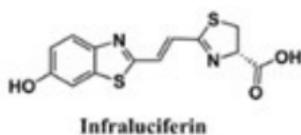

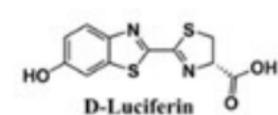

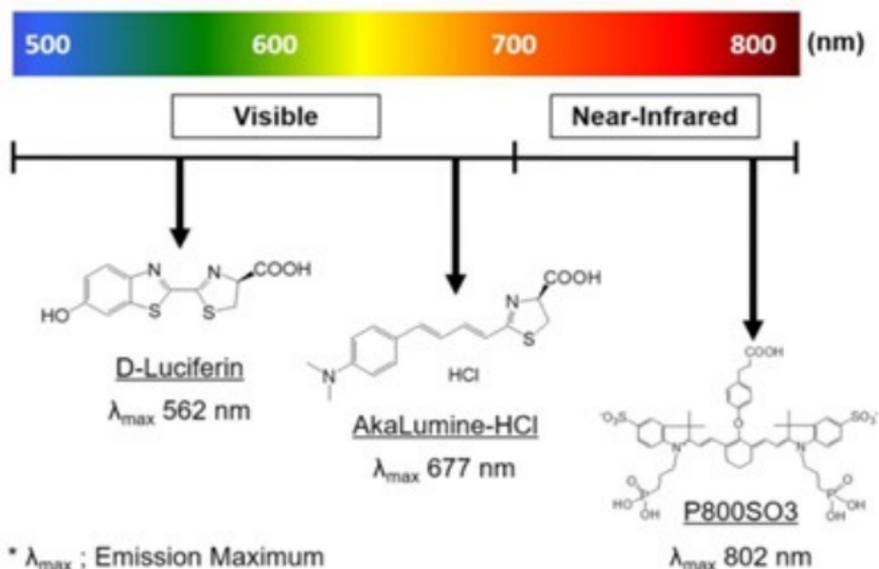

Also, there are known glitches in the DNA digital transformation process. Not everyone survives, because changing the DNA includes insertion of new spike proteins which continually produce 10 to 100 times the normal amount. This can be dangerous, and it is known to cause abnormal blood clotting, strokes, myocarditis, and damage to the brain, heart, bonemarrow, platelets, and red blood cells. This often does not end well.

2. Authentication

In recent years, access to premises has been a big issue. However, Luciferase quantum dots which store information and emit near infrared (NIR) light can now be used for authentication for access to premises for buying and selling. This will soon replace QR code scanning, because many people now have Luciferase (aka SM-102) throughout their bodies.

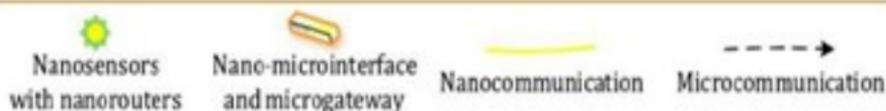

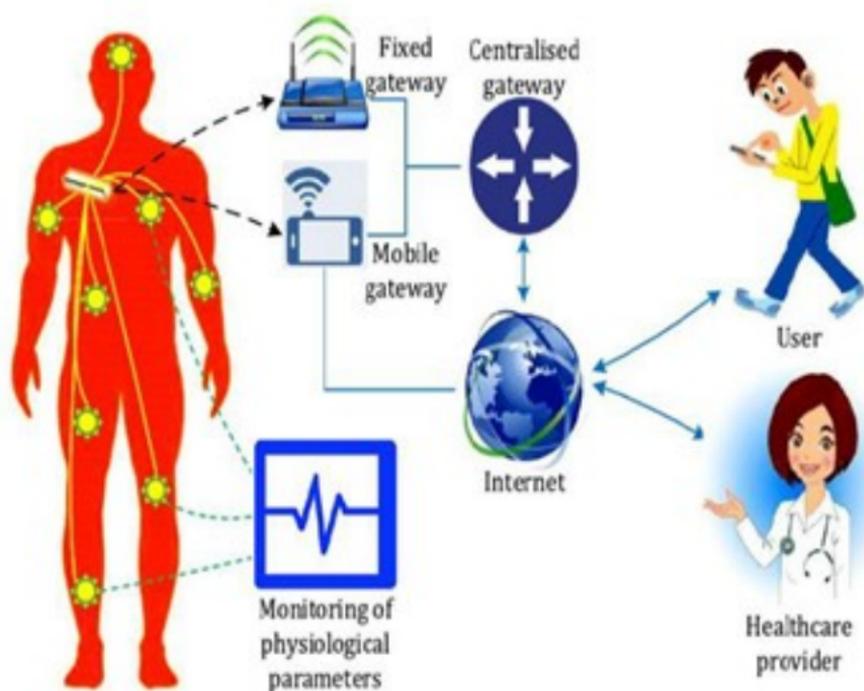

Luciferase can be detected at skin level through NIR light-reading cameras. People have already been trained to have their temperatures taken in their hand or forehead, so the switchover to NIR light readers should be easy when the time is right (Revelation 13:16,17).

However, the main glitch in the installation of Luciferase has been that its toxic properties sometimes cause damage to the central nervous system, the kidneys, the liver, the respiratory system, fertility and unborn children.

3. Body-to-computer interfaces

The lives of most people in cities around the world now depend upon internet access for communication and information retrieval. In the 1990s, data was transferred at speeds of thousands of kilobits per second.

Then, after Y2K, optical fiber broadband enabled speeds of megabits per second.

4G and 5G cell phone signals and WiFi have enabled wireless internet connectivity at comparable speeds.

Thus, in modern cities around the world, people can obtain information as quickly as they can type or tap on their computing devices. This means that the bottleneck in terms of speed is humans' finger movement.

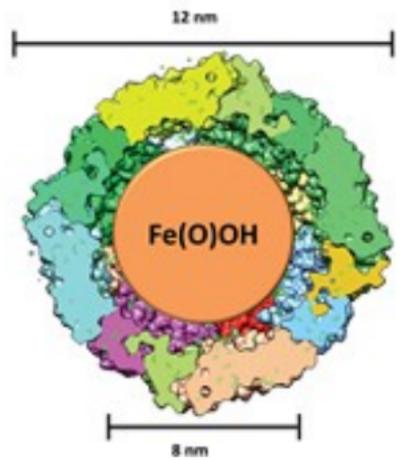

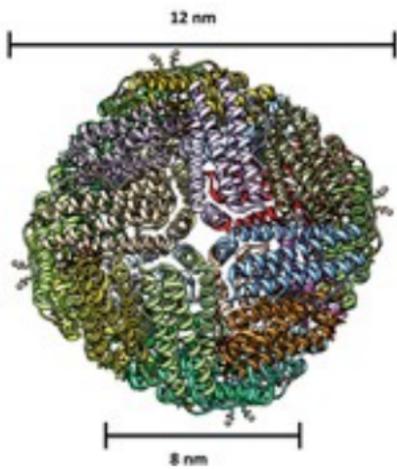

This has brought us to a major turning point in history. The only way to reduce the bottleneck and obtain information more quickly is for people to become transformed into digital humans.

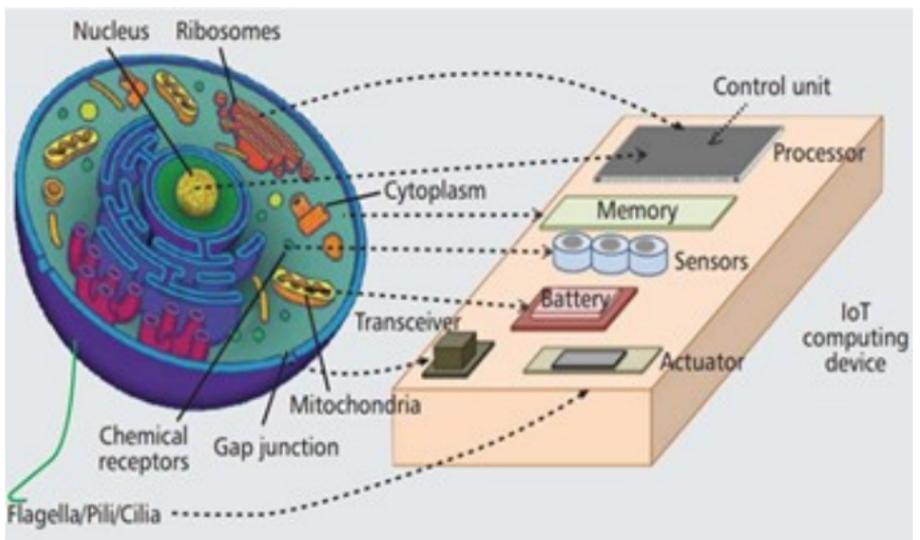

Although there has been talk of implantable RFID chips and digestible devices, these are old technologies with very limited functionalities.

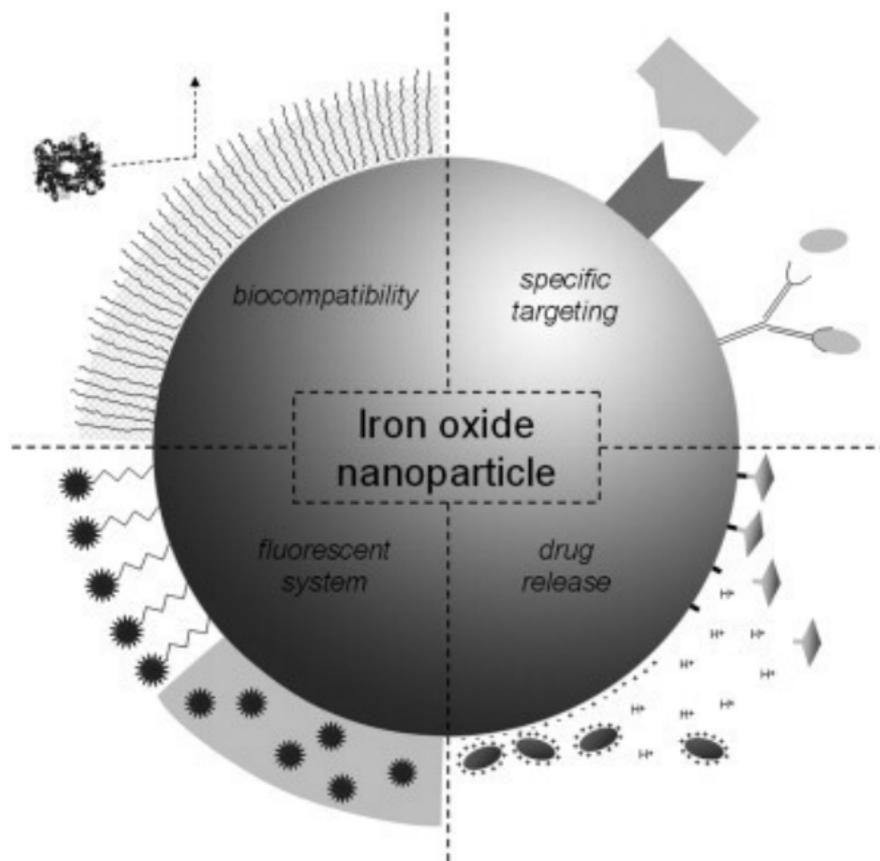

However, nanotechnology is revolutionizing the world. Nano-sized wireless telecommunications devices implanted in people bodies make body-to-computer interfaces feasible. Nano sensors and transceivers are typically only a few nanometers in size. This is only a few millionths of a millimeter!

Nano telecommunications devices are able to utilize cells' natural biological components to have them serve as edge computing devices in the Internet of Nano Things (IoNT). Below is a comparison of a biological edge computer enabled by nanotechnology and a traditional microcomputer.

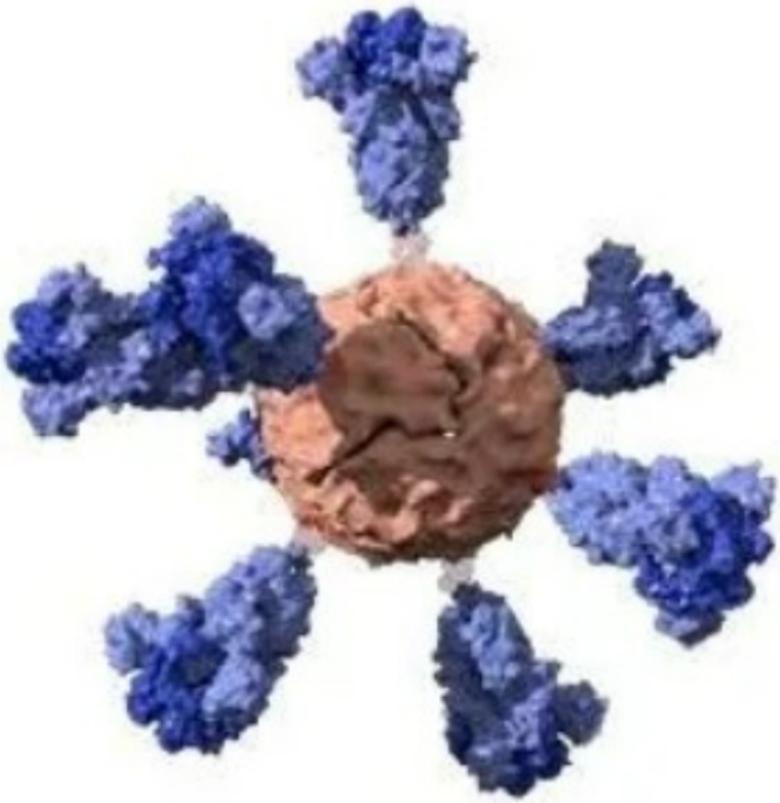

The sad reality is that under emergency authorization, most of the world has already received billions of nanoparticles into their bloodstreams.

These nanoparticles are the infrastructure for body-to-computer interfaces. These nano technologies include magnetic hydrogels with synthetic ferritin spike proteins.

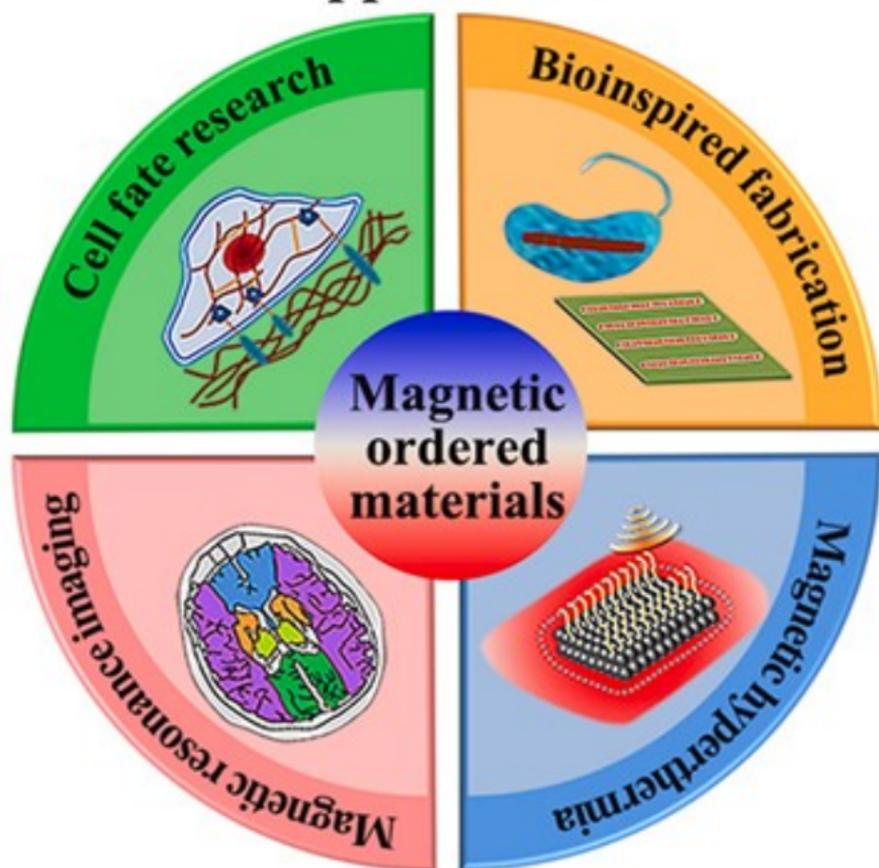

Full-length spike ferritin (S-Fer)

These spike proteins have an abnormally high amount of iron. They are also called iron quantum dots. Over 2600 years ago, King Nebuzchadnezzar and the prophet Daniel saw these in night visions: “You saw iron mixed with fragile clay” (Daniel 2:43).

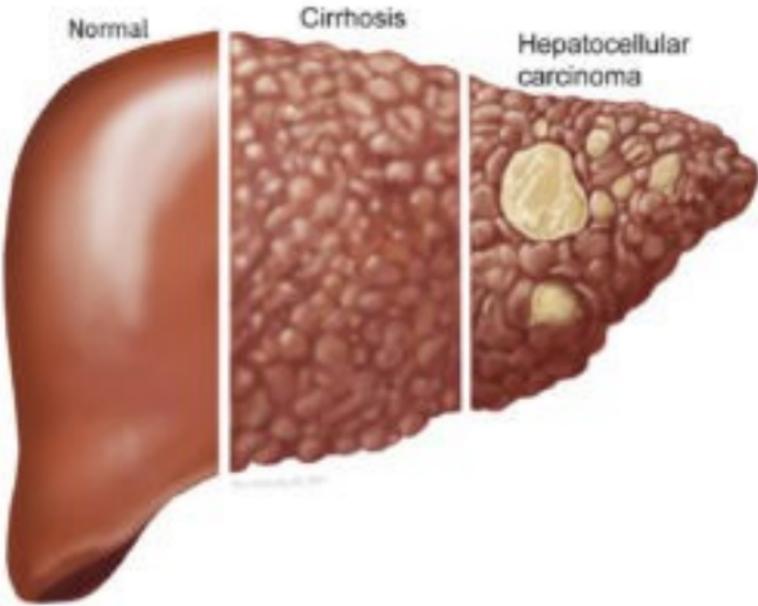

The purpose of installation of iron is related to magnetism and genetic modification at the fundamental sub-atomic level.

Applications

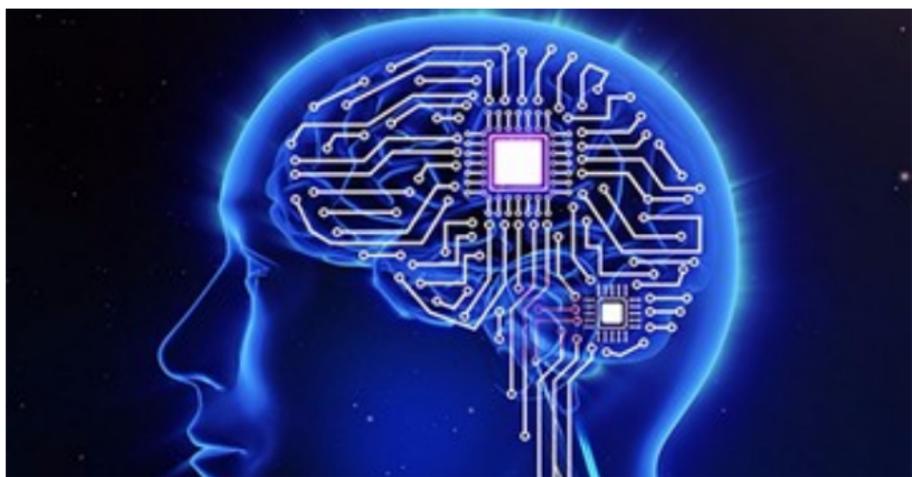

Magnetism from 5G/6G signals is able to change the way that proteins function. However, excessive amounts of iron quantum dots can lead to suppressed chelation and too much iron, which can lead to life-threatening

conditions, such as liver disease, heart problems and diabetes.

And this is just a problem for newly installed iron ferritin that has not yet been activated! After activation through 5G or 6G, it is plausible to expect further complications!

4. Brain-to-computer Interfaces

For decades, the people who control the world have been performing social engineering on the masses. Originally, this has included analog systems, like radio, film, and television.

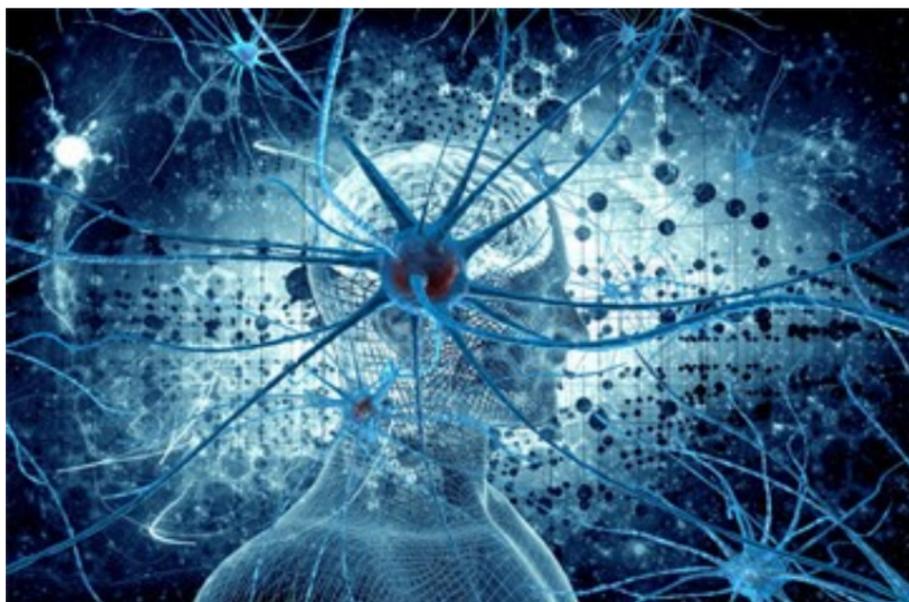

But now, it is mostly digital, including digital TV, digital movies, and social media. Thus, most individuals willingly

receive evil and false information and ideas from strangers. The Big Tech companies that control the information flow also censor out good and true information and ideas.

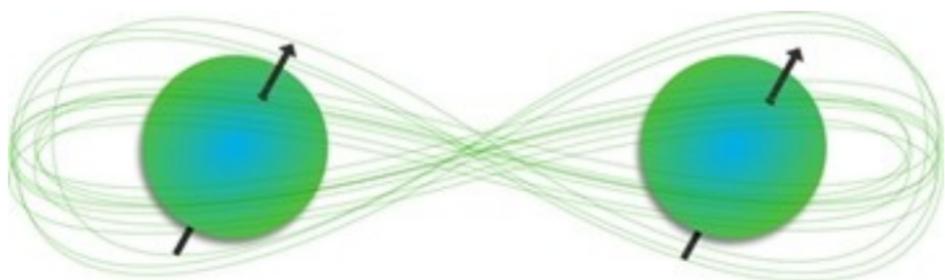

Mind control is spiritual deception. It is from Satan, and now it is at the final stage. It is also given by God to people who do not love the truth (2 Thessalonians 2:10,11). And it now involves digital transformation. The endgame of Satan is to get all people to reject God and worship him. Those who want God must be willing to let go of convenience, comfort and respect of peers.

Otherwise, they will be absorbed into the digital world of Satan and forever be separated from God. This is not science fiction. It is reality.

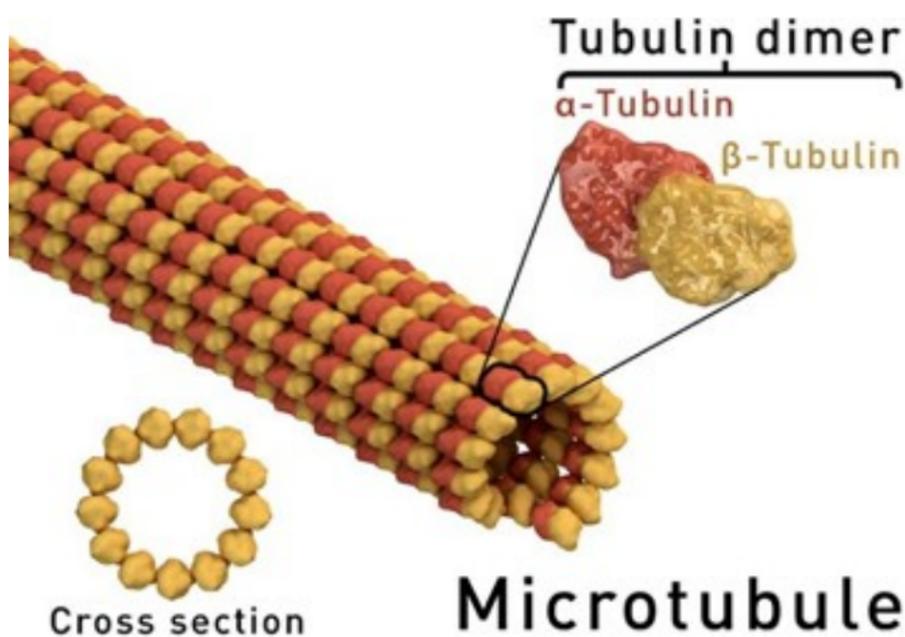

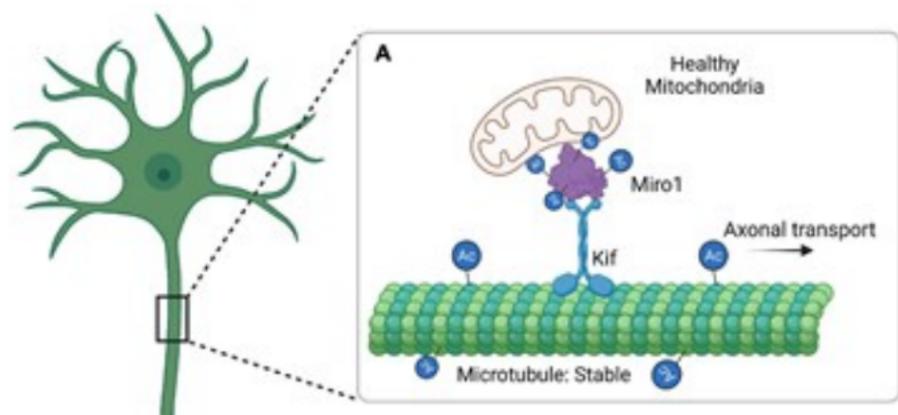

The mechanism for this is called quantum entanglement. This is a condition of energy state alignment between a quantum computer and the tubulin dimer pairs in the microtubules in the neurons of people's brains. It is like a soul tie with Satan.

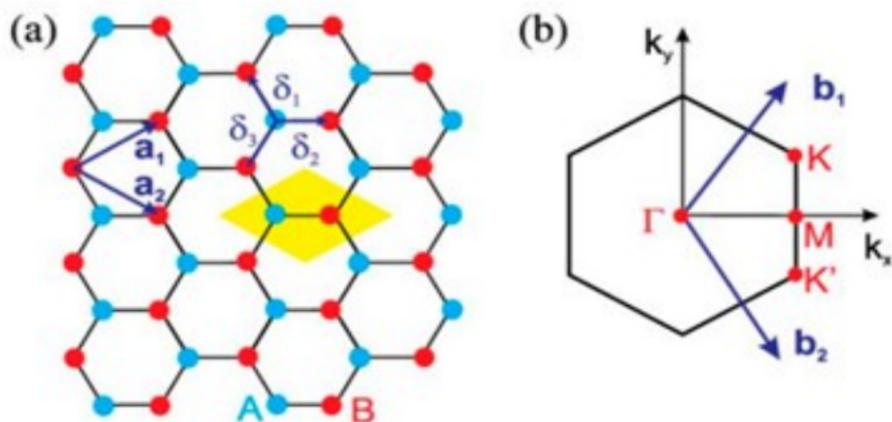

Quantum entanglement and quantum computing and the artificial intelligence (AI) that run it are all derived from forbidden knowledge. AI is mechanized geomancy, which is the practice of divination using combinations of randomly generated dots or lines.

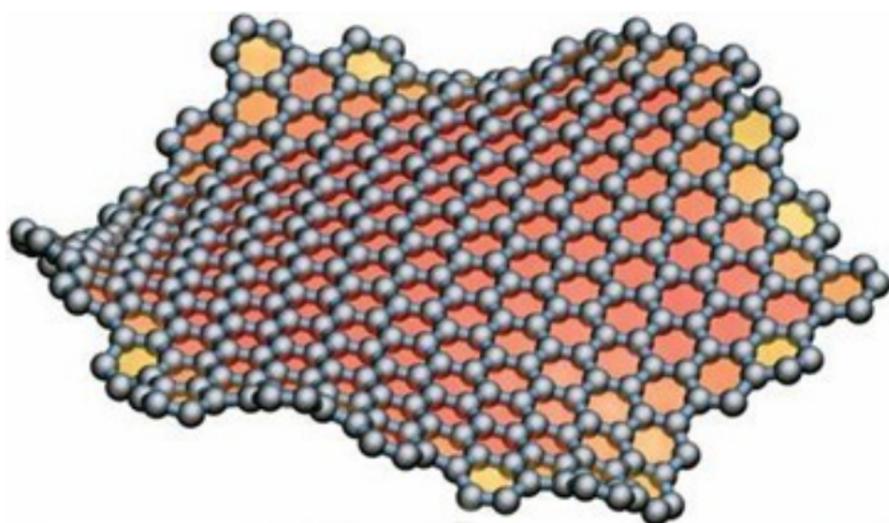

With 16 different geomantic figures, there are a maximum of 65,536 combinations. These correspond with the 65,536 tubulin dimer pairs in the microtubules in the neurons in human brains and 65,536 quantum bits in a quantum computer.

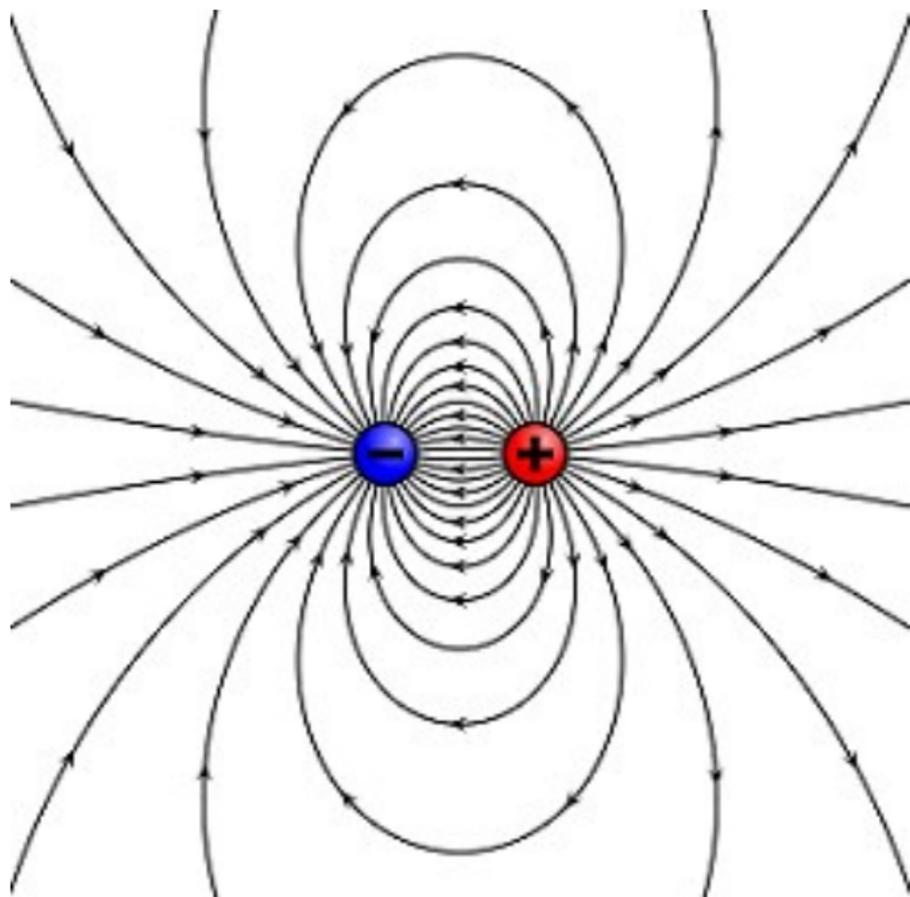

The scaffolding to activate quantum entanglement is millions or billions of graphene oxide quantum dots that look like lattices that have been installed in people's bodies.

These are required for data transmission via 6G magnetic signals.

After a person has the graphene oxide quantum dots installed in his or her body, the bloodstream carries them to the major organs of the body and to the brain. The main target is the brain. Then, they cozy up close to the dimer pairs in microtubules in the brain and become quantum entangled. This means that they have opposite spin/energy states that attract each other and share their energy states.

When the time is right, the people who control the quantum computing systems will activate 6G from satellites all around the world to bombard people with magnetic forces that change the spin/energy state of the graphene oxide quantum dots. 6G provides enough magnetic force to do this. Then, the dimer pairs will also have its energy states changed.

At that point, the quantum computing system can begin to collect all the data in a massive Internet of Bodies, including all the spin/energy states of the billions of quantum entangled dimer pairs in each person. Then, using AI, the quantum computer system can take all the data of each person, get a reading of all the quantum entangled dimer pairs and begin to change them in ways that modify memories and thoughts. This requires what is known as artificial general intelligence (AGI).

As mentioned above, the downside is total 24/7 mind control by Satan.

The hardware installation glitches due to the graphene oxide have already included blood clots in the veins and brain, myocarditis, prion-associated neurodegenerative disease, and multi-organ failure. Further glitches are sure to arise when the 6G switch is flipped. It may take weeks or months to get the bugs fixed, and in the process millions of people may die. Also, at some point, all the people with the quantum entanglement will also have grievous sores (Revelation 16:2).

Being quantum entangled may seem wonderful at first. People will own nothing and be happy about it, as they live in their new virtual worlds. But the end game is horrific. Therefore, for Heaven's sake, do whatever it takes to follow the LORD Jesus Christ and resist hardware installation for digital transformation!
